

THE SLEEPER

stage plot

Rack DI/XLR Split-Outputs

—> **FOH w/ split cable**

1. Kick Drum (Trigger)
 2. Samples L
 3. Samples R
 4. Bass
 5. Guitars L
 6. Guitars R
 7. Vocals 1
 8. Vocals 2
- samples L and R as well as guitars L and R have to be mixed as full stereo tracks, meaning two tracks panned 100% left and right independently
 - no monitors needed
 - band handles own in-ear monitoring
 - no guitar/bass cabs needed
 - position of IEM/DI-rack, ego risers and moving heads depends on stage conditions
 - spare di boxes, cables and microphones on site would be ideal
