## Rack DI/XLR Split-Outputs

—> FOH via 8ch XLR snake (5m) to stage box

1. Kick Drum (Trigger)
2. Samples L
3. Samples R
4. Bass
5. Guitars L
6. Guitars R
7. Vocals 1
8. Vocals 2

- samples L and R as well as guitars L and R have to be mixed as full stereo tracks, meaning two tracks panned 100% left and right independently  
—> we are automating our own panning and EQ-ing on the guitar stereo track
- no monitors needed  
—> band handles own pre-split in-ear monitoring, no signals back from FOH needed
- no guitar/bass cabs needed
- position of IEM/DI-rack, ego risers and our own lighting depends on stage conditions  
—> therefore, please remove stage monitors, if possible
- spare di boxes, cables and microphones on site would be ideal

## Needed Inhouse Drum Mic Setup:

(only, if we are supplying the evening drum backline)

- Kick
- Snare
- Rack Tom
- Floor Tom
- Overhead Stereo
- HiHat

## Any questions? Feel free to contact:
